## EDUCATION

### University of Amsterdam

*BSc in Business Analytics (Honours Class)*

Relevant Coursework: Finance I-II, Macroeconomics, Accounting, Machine Learning, Time Series

Amsterdam, Netherlands

*September 2024 – July 2027*

## WORK EXPERIENCE

### Arandu Partners

*Finance & Analytics Summer Intern - Full Time*

São Paulo, Brazil - In Person

*July 2025 – September 2025*

- Built and validated ML models (OLS, L1/L2, ElasticNet) to forecast Brazilian inflation in the short-term to support portfolio allocation decisions; results outperformed Brazil's primary institutional benchmark. Designed an end-to-end pipeline (data collection, cleaning, feature engineering, model training, validation, and backtesting).
- Built scalable Python research pipelines (data ingestion and cleaning, feature engineering, model training, validation and backtesting) across 100+ macroeconomic and financial variables; implemented parameter sweeps and cross-validation
- Identified an operational bottleneck and led a team of 5 interns to develop a program (Python, SQL, and VBA) that automated internal reporting for financial data across 10+ funds (~\$5B AUM), reducing manual workload by ~50%. Coordinated meetings, tasks, and communication with stakeholders. Presented final implementation and methodology to C-level executives and department heads.

### ImprovabilityAI - AI Reporting Startup

*Analytics & Operations Intern - Part Time*

London, UK (Remote)

*Nov 2022 – Oct 2023*

- Developed an analytical tool with Python to extract and process company disclosures (e.g., quarterly reports), evaluating sustainability-related metrics and identifying patterns, and converting data into structured datasets.
- Coordinated a team of interns in the production and standardization of corporate analysis reports, assigning tasks, defining weekly deliverables, and tracking team progress. Produced weekly reports for C-level executives

## PROJECTS & LEADERSHIP INITIATIVES

### Quantitative Finance Club

*Founder & Team Lead*

Amsterdam, Netherlands

*November 2025 – Present*

- Secured a partnership with 3 investment funds; structuring projects, setting up research workflows and leading communication with stakeholders
- Built and backtested S&P 500 long/short factor strategies in Python with robust preprocessing and portfolio construction; implemented sector/beta neutrality, exposure constraints, and measured signal predictiveness (rank correlation), turnover, and risk-adjusted returns
- Designed an event-driven trading strategy based on FDA rejection events in mid-cap biotech companies, modeling market overreaction dynamics post-rejection, and backtested abnormal returns relative to market benchmarks
- Lead 5+ students in Equity Research projects, researching market microstructure and implementing trading strategies

### Quantitative Financial Analysis Tool with Machine Learning

*Models to Predict Bitcoin Price Using Financial Markets' Data*

*February 2025 – March 2025*

- Implemented predictive models for financial time series, comparing linear regressions (simple and multiple) with Random Forest to forecast Bitcoin price movements.
- Extracted insights on Bitcoin's integration with traditional markets, identifying that equity assets have stronger predictive relevance, and evaluated performance differences between linear and non-linear models.

## SKILLS, LANGUAGES & INTERESTS

**Hard Skills:** Financial & Statistical Modeling, Portfolio Construction, Automation, Risk Analysis

**Soft Skills:** Clear Communication, Proactivity, Teamwork, Pattern Recognition, Problem Solving

**Technical:** Python (advanced), SQL, R, Excel (VBA), PowerPoint, Data Pipelines, AI Tools

**Languages:** Fluent in English, Spanish, and Portuguese; Intermediate German (B2); Basic Japanese

**Interests:** Poker, Strategy Games, Tennis
